Technical Interview Task – POS Billing Software

Task: POS Billing Software

Build a POS (Point of Sale) and Billing Software for a textile/retail business.

You may use any technology stack, framework, database, or tools you are comfortable with.

The application should have two portals:

1. Admin Portal

The Admin Portal should include:

- Product CRUD
- Staff management
- Product return handling
- Supplier management
- Ledger and reports
- Billing/transaction related management

You may add other relevant functionality based on your understanding of a POS system.

2. Billing Portal

The Billing Portal is for staff to handle the complete billing process.

Staff should be able to select/bill products, make the payment, and generate/print the bill.

The billing portal should also have appropriate staff access and transaction handling.

3. Mobile Admin UI

The complete Admin Portal should be available in a mobile application-style web layout.

Provide a URL/page where we can open and test the entire Admin Portal in this mobile layout, including all its pages and functionality.

A separate mobile application/APK is not required.

Submission

The task must be completed within 24 hours from the time you receive this email.

After completing the task, please reply with:

1. Short Project Description
Briefly explain what you built.

2. Technology Stack
Mention the frontend, backend, database, and other major technologies used.

3. Live/Demo URL
If deployed, provide the live URL.

4. Mobile UI URL
Provide the direct URL to test the complete Admin Portal in the mobile layout.

5. Public GitHub Repository
Provide a public GitHub repository containing the complete source code.

6. Test Credentials
Provide the login credentials required to test the application, including Admin and Staff accounts where applicable.

7. Additional Notes
Mention any important setup instructions, assumptions, or limitations.

Evaluation

The project will be evaluated based on:

- Understanding of the requirements
- Problem-solving ability
- Application functionality
- Frontend and backend implementation
- Database design
- Authentication and access control
- UI/UX
- Mobile UI implementation
- Code quality and project structure
- Overall completeness

You are free to decide the technology stack, architecture, database structure, UI design, and implementation approach.

Deadline: 24 hours from the time this email is received.

Please make sure the GitHub repository, deployed application (if available), mobile UI, and test credentials are accessible for testing.
